

JOURNAL

VOL. 21, NO. 1 DECEMBER 1985

TECHNICAL PAPERS

Shallow Sub-bottom Impedance Structures Using an Iterative Algorithm and Empirical Constraints

D. Case Caulfield, David D. Caulfield and Yung-Chang Yim 7

Some Techniques of Enhancing Seismic Reflection Data for Stratigraphic Interpretation

Sudhir Jain 15

Amplitude-Offset Relationships over Shallow Velocity Inversions

D.F. Poley, D.C. Lawton and S.M. Blasco 30

Two-component Acquisition as a Routine Procedure for Recording P-waves and Converted Waves

R. Garotta, P. Marechal and M. Magesan 40

Median Filtering: Review and a New F/K Analogue Design

Robert R. Stewart 54

The Seisgun - Part I: Field Tests

J.L. Varsek and D.C. Lawton 64

The Seisgun - Part II: Data Acquisition from a Study of Stacked Sections

J.L. Varsek and D.C. Lawton 77

Modelling Marine Seismic Acquisition Systems in the kf Domain

Peter M. Duncan 89

Manuscripts of papers for publication in the Journal should be sent, in triplicate, directly to the Editor. Papers received by the Editor will be deemed property of the C.S.E.G., unless the release of the paper is granted in writing by the Editor.

Instructions for preparation of the manuscript may be found in "Instructions to Authors" on page 4.

Short Notes and discussions of the papers published in the Journal are welcome.

Responsibilities for all statements and scientific opinions made in the papers lie with their authors.

Only unpublished material should be submitted for publication. The authors are responsible for clearing their papers for publication in the

C.S.E.G. Journal from any Society or Journal which may have prior publication rights to the manuscripts.

Reprints can be supplied at cost if ordered prior to publication.

Subscription to the Journal is included in the membership dues. Non-members and organizations should direct their enquiries to the Secretary, C.S.E.G.

Advertisements are welcome. Rates may be obtained by writing to the Business Editor, C.S.E.G. Journal.

Previous Issues of the Journal are still available. For prices contact the editor.

Claims for non-receipt of Journal should be made within three months of publication.

Calgary, Alberta T2P 0W7**

INSTRUCTIONS TO AUTHORS

1. *Submission of manuscript*

Submit an original and two copies of each manuscript, complete with illustrations, list of references, and list of figure captions to the Editor. You will find the address on the masthead of this issue.

Technical papers require an abstract; short notes do not.

Manuscripts should be typed, double-spaced on 21.6 x 28 cm paper.

2. *Organization of manuscript*

a) Title, followed by the names, affiliations and full addresses of all the authors.

Make the title of your paper as brief as possible. The first word should be a significant one, suitable for both classifying and indexing the paper. If your paper was given orally at a meeting, include a footnote specifying the name of the organization that held the meeting, where held, and the date of presentation.

b) Abstract. An abstract is not an introduction or a list of contents, but is rather a summary of the essential qualities of the paper.

Every technical paper must be accompanied by an abstract of approximately 200 to 300 words.

c) Headings. Normally three levels of headings should be used. First-order headings are centred and capitalized; second-order headings are capitalized at the left-hand margin; third-order headings are underlined or italicized at the left-hand margin.

d) Illustrations should normally be black-and-white line drawings or half-tones. All illustrations should be compatible with a 21.6 x 28 cm page size, two-column format; *i.e.*, figures will be reproduced either 9 cm (half-column) or 18 cm (full-column) in width in vertical format, or 23 cm wide in horizontal format.

— Figures should be drafted at approximately twice the published size. Photographs should be glossy prints, or in PMT or KP5 format.

— All figures must be clearly marked on the back with the figure number and author's surname.

— Captions should be provided on a separate page of the manuscript; they should not be lettered on the original of the illustration, nor

should the title be designed within the frame of the illustration. Colour illustrations may be used if deemed by the editor to be essential to the paper. Authors will be responsible for additional costs resulting from the use of colour.

— Foldouts should be avoided unless absolutely necessary. Cross sections should be designed to fit on facing pages.

— Original materials will not be returned to authors unless specifically requested at the time of submission.

— Tables, formulae and equations can be difficult to type-set and proof-read. They should be submitted in a form suitable for direct reproduction.

e) References. Authors are responsible for citing and listing references correctly. Only references cited in the text should be listed under the heading REFERENCES.

References *not* cited in the text should be grouped separately under the heading REFERENCES FOR GENERAL READING.

For further details on the format of references see Geophysics' "Instructions to Authors" (1982, Geophysics, v. 47, p. 1608-1610).

3. Measurements should be in SI units. Imperial unit equivalents may be given in parentheses, but this is not obligatory.

4. Authors are strongly advised to have their manuscript critically read by at least one reader familiar with the subject matter before it is submitted. All manuscripts submitted are subject to a standard peer review process.

5. The copyright of accepted and published material is reserved by the Canadian Society of Exploration Geophysicists.

6. Page proofs will be forwarded to authors with a return date specified and with an order form for separates if they are desired. If there is more than one author, it must be clearly indicated to whom the proofs are to be sent. Authors may order separates in any quantity and will be billed for them at cost. At the discretion of the Editor, *minor* changes (as opposed to corrections) may be accommodated at page-proof stage. Major revisions at this or at a later stage will be charged to the author.

| Journal Editor: | Robert R. Stewart |
| Recorder Editor: | David W. Paterson |

PRESIDENT'S PAGE

1985 has been a year of upgraded publications for the Canadian Society of Exploration Geophysicists. The Recorder became a monthly magazine as opposed to a newsletter, and a combined photo directory/ annual report was introduced. But of all CSEG publications, the one most important to the Society and its membership is the Journal.

The objective of our society is to promote the science of geophysics. This publication does that best. Our Journal is the publication that contains the technical highlights of the year as reviewed by our editorial staff.

We are encouraged by the response to the solicitation for technical papers on case histories and new technological development, and we may ultimately be able to publish two Journals for 1986. That will be a milestone!

The advancement of geophysical technology is a particularly strong concern of mine. The future of our industry and of the CSEG depends on it. As exploration prospects become more subtle and economics become more important, the tool that can very significantly affect hydrocarbon finding costs must be sharpened and refined.

It is publications like our Journal that best communicate to our industry new ideas and products which will ultimately make their way into the practice of that industry.

I thank the authors for their contributions, and the Journal editor and his staff for their time and effort in making this publication possible.

Larry C. Fichtner
