

CANADIAN JOURNAL of EXPLORATION GEOPHYSICS

Volume 29, No. 2

December 1993

TECHNICAL PAPERS

- 399 **Computation of fully interpreted *SH* seismograms for coal seams by the ray-reflectivity method**
P.F. Daley and F. Hron
- 402 **Wave propagation in viscoacoustic heterogeneous media: a velocity-pressure finite-difference method**
A. Vafidis, N. Dai and E. Kanasevich
- 411 **A coincident-coil frequency-domain electromagnetic prospecting system**
K. Duckworth, E.S. Krebs, J. Juigalli, A. Rogozinski and H.T. Calvert
- 419 **Optimization of seismic migration through use of well information**
L. Lines
- 429 **3-D Seismic expression of a cryptoexplosion structure**
J.H. Isaac and R.R. Stewart
- 440 **An integrated surface seismic/seismic profile case study: Ricinus Field, Alberta, Canada**
R.C. Hinds, R. Kuzmiski and N.L. Anderson

EDITORIAL STANDARDS

Submission of Manuscripts is invited in all areas of geophysics related to exploration. Case histories are particularly welcome. Manuscripts should be sent on disk with hard copy, directly to the editor. Papers received by the editor will be deemed property of the CSEG, unless the release of the paper is granted in writing by the editor. There are no page charges, but additional costs of reproduction (e.g., colour figures or fold-outs) are charged to authors.

Short Notes and discussions of the papers published in the *Journal* are welcome.

The *Canadian Journal of Exploration Geophysics* adopts as its editorial standard the "Instructions to Authors" of the Society of Exploration Geophysicists as published in *Geophysics* 52 (Jan. 1987), 1-10, and revised in *Geophysics* 53 (Jan. 1988), 1-7. Some augmentation to the SEG Instructions is included below and in cases of ambiguity or conflict the present CSEG Instructions will take precedence.

Submission of Manuscript

Material may be submitted on computer disk (3.5" floppy disk), complete with figures, tables, references, and figure and table captions. Provide three paper printouts of the document. Provide all original material that can not be produced in word processing software (e.g., figures) as per instruction described below in 4. The document must be created on standard software programs such as Microsoft Word[®] or WordPerfect[®].

Or, submit an original document and three copies, i.e., four copies in all, of each manuscript, complete with figures, tables, references, and figure and table captions. The figures and tables submitted with the original manuscript should be the originals described below in 4. However, it is acceptable to submit four sets of figure/table copies, the originals to be supplied upon acceptance of the paper. Manuscripts should be typed, double-spaced, on 21.5 x 28 cm (8.5 x 11 in) paper or on A4 (metric-format) paper.

Organization of Manuscript

1. **Title page.** It should give the title, followed by the names, affiliations and full addresses of all the authors. Make the title of your paper as brief as possible. The first word should be a significant one, suitable for both classifying and indexing the paper. If your paper was given orally at a meeting, include a footnote specifying the name of the organization that held the meeting, where held, and the date of presentation.
2. **Abstract.** An abstract is not an introduction or a list of contents but rather a summary of the essential qualities, including the principal conclusions of the paper. (See the SEG Instructions.) Every technical paper must be accompanied by an abstract of approximately 150 to 300 words. Short notes do not require abstracts.
3. **Headings.** Normally three levels of headings should be used. First-order headings are centred and capitalized; second order headings are positioned at the left-hand margin; third-order headings are indented, underlined or italicized, and followed by a dash. Numbering of sections is optional.
4. **Figures, tables and formulae.** These should be compatible with a 21.5 x 28 cm page size, two-column format; i.e., they will be reproduced at either 9 cm (half-column) or 18 cm (full-column) width in vertical format or 23 cm wide in horizontal format.
 - Figures should be drafted at approximately twice the published size. Any clean figures of good contrast and overall quality are acceptable. However, original artwork, glossy photographs or PMTs of manuscript-page size, are preferred.
 - All figures must be clearly marked on the back with the figure number and author's surname.

- Colour illustrations are encouraged where the use of colour is deemed essential. However, authors will be responsible for the additional costs of colour reproduction.
- Foldouts should be avoided if possible but are encouraged where necessary. Again, however, authors will be billed for any additional costs.
- Original materials will not be returned to authors unless specifically requested at the time of submission.
- Tables, formulae and equations can be difficult to typeset and proof-read. They should be submitted in a form suitable for direct reproduction; for example, laser-printer output is ideal. In such cases authors should follow the *Journal's* conventions regarding italicization, bold-face type, punctuation, etc.
- Captions for figures and tables should be provided on a separate page or pages of the manuscript; they should not be lettered on the original, nor should a title be designed within the frame of the figure or table. A figure (or table) and its caption should be a self-contained unit which, in its essentials, can be understood without reference to the text.

5. **References.** This area is the one with the greatest incidence of errors in most papers. Authors are urged to check citations in the text and entries in the References most carefully. The responsibility for correctness lies with the authors. Only references cited in the text should be listed under the heading REFERENCES. References not cited in the text, but deemed to be essential, should be grouped separately under the heading REFERENCES FOR GENERAL READING. For further details on the format of references, the SEG Instructions are adhered to with the following exceptions: commas are omitted before the word *and* in a string of authors' names; between journal name and volume number, and after words like *Bull.* and *Proc.* in the name of a publication.

Units and Spelling

Physical quantities shall be expressed in SI units. Imperial or CGS equivalents may additionally be given. See R.E. Sheriff's *Encyclopedic Dictionary of Exploration Geophysics* (SEG, 2nd ed., 1984) for a comprehensive guide to SI units, forms of abbreviation, etc. Official Canadian SI spelling (e.g., metre) shall be used. In other cases Canadian spelling is preferred (e.g., centre, modelling, sulphur) although in many instances acceptable alternatives exist. Authors should, above all, be consistent in their spelling.

Review, Revision and Reprints

Authors are strongly advised to have their manuscripts critically read by at least one reader familiar with the subject matter before it is submitted. All manuscripts submitted to the *Journal* undergo a standard peer-review process. Galley proofs will be forwarded to authors with a return date specified and with an order form for reprints. If there is more than one author, it must be clearly indicated to whom the proofs are to be sent. At the discretion of the Editor, minor changes (as opposed to corrections) may be accommodated at galley-proof stage. Major revisions at this or at a later stage will be charged to the author. Authors may order reprints in any multiple of fifty and will be billed for them at cost. They should be ordered at this time only; back orders will entail much higher costs.
